

# Restricted Station Capacity Update

May 19, 2022

**Attention:** Rideau St. Lawrence Utilities

As per your request, please see below for the current restriction status for a station which supplies your territory. Hydro One reviews all stations periodically for the following:

- Thermal capability of HON equipment
- Short circuit ratings of interrupting devices and available short circuit current
- Normal station operating conditions
- Known generation currently connected
- Transmission constraints which may impact station operation

Station busses may, from time to time, be removed from, or added to the restricted list. Hydro One will notify you if a station or bus status affecting your supply has changed. The table below identifies restriction that affect your supply.

Station	Feeder	Bus	Status
Morrisburg TS	M23, M24, M25 M26	JQ	RESTRICTED

If a Hydro One station and/or bus has been removed from the restricted list in the above table (Status = Not Restricted), you may start processing generator applications as follows:

- All DER applications must still be assessed by the LDC by referring to the "Hydro One List of Station Capacity" posted on the Hydro One website prior to requesting a Connection Impact Assessment from Hydro One.
- Micro-Embedded applications may be processed in accordance with the "Technical Interconnection Requirements (TIR) – Micro Generation & Small Generation, 3-Phase, less than 30kW" found on the Hydro One website.

If a Hydro One station and/or bus has been added to the list in the table above (Status = NOW RESTRICTED), you are not to provide an offer to connect to any generator going forward.

If you have further questions regarding the restricted stations list, please contact us at [LargeAccounts@HydroOne.com](mailto:LargeAccounts@HydroOne.com).

Thank you,
